

VITELLO CALFSKIN

PRODUCT CHARACTERISTIC SHEET

PRODUCT DESCRIPTION:

Vitello Calfskin is elegant calfskin with a fine natural grain and a rich hand and luster. This is an exceptionally soft leather with a light protective, semi-bright topcoat.

CHARACTERISTICS:

Being a natural product, Vitello will exhibit some natural characteristics such as healed scars, veins, neck wrinkles, and grain variation throughout a skin and from skin to skin.

Super softness.

Durability and built-in protection from soiling, fading, and wear.
More consistency and less apparent defects than found in Aniline leathers.

Natural variation in grain texture throughout the skin and from skin to skin.

These skins average 25-30 SF in size.

A: Permanent natural creases on the hide caused by fat deposits in the live animal usually found in the neck, shoulder, and belly area.

B: Loose grain is characterized by large "breaks" in the density of the grain visible on the surface of the hide. Generally-speaking, loose grain is often found towards the perimeter of a hide.

C: Characteristic wherein the grain structure visible on the surface of the hide is more uniform and "tight." Tight grain is generally preferred and found more consistently towards the interior of the hide.

D: Characterized by many clearly visible blood vessels, either closed or cut open by splitting or shaving operations.

FAT WRINKLES

LOOSE GRAIN

TIGHT GRAIN
